Harrisburg, Pa – August 15, 2017 -- BI Solutions, Inc (BISI), a data warehousing and business intelligence Information Technology consultancy headquartered in Harrisburg, PA, received the 2016 Admiral Stanley R. Arthur Award for Logistics Excellence as a member of the Naval Supply Systems Command Weapon Systems Support P-8A Logistics Cell (LOGCELL) team. The award was presented to BI Solutions by Vice Admiral D.R. Smith during a ceremony at the Pentagon on August 14, 2017.

The Admiral Stanley R. Arthur Award is a national award presented annually to recognize military and civilian logisticians who epitomize excellence in logistics planning and execution. BI Solutions is the prime contractor of the LOGCELL project, which supports the P-8A Poseidon, the Navy's maritime, patrol and reconnaissance aircraft.

BI Solutions played a vital role on the LOGCELL Project in developing the business rules, dashboard design and data integration required to create a single reporting system to support a complete supply chain analysis. P-8A LOGCELL is one of over 50 applications within the Information Management for the 21<sup>st</sup> Century (InforM-21) Naval Supply Enterprise Data Warehouse, of which BI Solutions is the sole contractor, bringing data from various sources into dashboards for ease and speed of decision making.

LOGCELL was selected for this prestigious award because it demonstrated a significant impact on readiness and cost avoidance, resulting in a 72% increase in number of aircraft flight ready, a 300% increase in flight hours, and back order reduction of 62% per aircraft. Additionally, \$362 million in cost avoidance was realized by identifying issues within the life cycle and supply chain.

"It's a great honor for BI Solutions to be recognized for the advanced data analytics we perform for the US Navy." said Erica Bryce, President of BI Solutions.

Founded in 2002 by three Penn State University graduates, BI Solutions is a woman-owned small business enterprise specializing in data warehousing, enterprise reporting & data analytics for state & federal government, higher education, and private industry.
